DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Yutaka Kido (JP 11-17877).

Regarding claim 1, Yutaka Kido discloses a facsimile apparatus for reading image data of a both-side original and transmitting it, comprising: reading means for reading images on both sides of the original; discriminating means for discriminating whether effective image data is included on both sides of the original read by said reading means or not; and control means for executing a both-side transmission of the image data read from the both sides of the original if it is determined by said discriminating means that at least one sheet of original in which the effective image data is included on the both sides exists, and executing a one-side transmission of the image data read from a front side of the original in the other cases (pages 7-13).

Regarding claim 2, Yutaka Kido discloses an apparatus according to claim 1, wherein even if at least one sheet of original in which the effective image data is included on the both sides exists, when a receiver on a partner side does not have a both-side transmission mode, only the sides including the effective image data are transmitted in order from the front side and a reverse side by using a one-side transmitting procedure (pages 7-13).

Application/Control Number: 09/865,697

Art Unit: 2622

Regarding claim 3, Yutaka Kido discloses, an apparatus according to claim 1, further comprising operating means for designating a compulsory front side reading mode for reading only the image on the front side of the original, wherein when said compulsory front side reading mode is selected by said operating means, even if at least one sheet of original in which the effective image data is included on the both sides exists, only the front side of the original is read and the read image data is transmitted in a one-side mode (pages 7-13).

Regarding claim 4, Yutaka Kido discloses a control method of a facsimile apparatus for reading image data of a both-side original and transmitting it, comprising: a discriminating step of discriminating whether effective image data is included on both sides of the read original or not; and a control step of executing a both-side transmission of the image data read from the both sides of the original if it is determined by said discriminating step that at least one sheet of original in which the effective image data is included on the both sides exists, and executing a one-side transmission of the image data read from a front side of the original in the other cases (pages 7-13).

Regarding claim 5, Yutaka Kido discloses a method according to claim 4, wherein even if at least one sheet of original in which the effective image data is included on the both sides exists, when a receiver on a partner side does not have a both-side transmission mode, only the sides including the effective image data are transmitted in order from the front side and a reverse side by using a one-side transmitting procedure (pages 7-13).

Regarding claim 6, Yutaka Kido discloses a method according to claim 4, wherein when a compulsory front side reading mode for reading only a image on the front side of the original is selected, even if at least one sheet of original in which the effective image data is included on the

Art Unit: 2622

both sides exists, only the front side of the original is read and the read image data is transmitted in a one-side mode (pages 7-13).

Regarding claims 7-9, arguments analogous to those presented for claims 1-4 are applicable to claims 7-9.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Houshang Safaipour whose telephone number is (703)306-4037. The examiner can normally be reached on Mon.-Thurs. from 6:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward L Coles, Sr. can be reached on (703)305-4712. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
